

Teacher is a great profession

Teacher... We often use this word, but actually we don't think about how it plays a huge role in our life. It is difficult to imagine our society without schools and teachers. Because everyone learns own future ways, upcoming social life from teachers and schools.

In my opinion, teacher is a difficult job. Teachers don't just teach their subjects, also help to navigate student's life. And they have to be able to find an overall language with each student. They always make an effort to help all students, to give new knowledge, to help them make plans and achieve their goals.

In addition, teachers have to check the works of students, prepare for lessons. They also conduct various interesting and useful events with students.

I am Korean, so I didn't know Russian when I first started to go to school in Kazakhstan. I am always thankful to my teachers. Because they individually helped me more with subjects, conversation and also helped to adapt quickly. So I think that thanks to them, now I can speak in Russian fluently and communicate with people. In short, they play the huge, priceless role in my life.

In conclusion, I want to say that teachers always ready to help and support us. Therefore, we should respect them too and remember the memories, we always have with them.
